

## *Products Overview*

All [Synthetic Grass Warehouse](#) (SGW) products are designed to look and feel like natural grass. It's ideal for homes, businesses, parks, sports fields, putting greens, pet runs and it saves water. SGW's products are highly durable and can withstand pets and consistent foot traffic. The beauty behind SGW's products is that they are low maintenance, require absolutely no watering and no mowing. Additionally, the Durafill infill technology is non-absorbent, anti-microbial and anti-bacterial and features heat resistant properties, while remaining environmentally safe. Although crumb rubber has not been proven to cause any health issues, SGW does not use this product. The filling used in the grass is called "infill," or "Durafill," which is safe, coated sand that helps moderate the temperature of synthetic grass.

### **Products**

SGW offers a variety of products to fit everyone's need – from the golf enthusiast, to the corporate office, to the homeowner. SGW is stocked full of:

- [Landscape product lines](#)
- [Color turf](#) (Caribbean Blue, Slate Gray, Pink Blend, Purple Royale, Chocolate, Mojave)
- [Pet systems](#)
- [Golf products](#) (putting greens, driving mats, portable driving mats)
- [Playground systems](#)

### **TigerCool® Technology**

SGW also offers American-made [TigerCool®](#), the latest in synthetic grass cooling technology and already featured in most products. TigerCool® is created by Tencate, a worldwide innovator of space-age yarns for NASA and Boeing. Its yarns are engineered with heat reflective color pigments and advanced U.V. inhibitors that reduce surface temperatures. As the leading distributor of high quality, technologically-advanced products, a series of solar panel tests were conducted and indicate that synthetic grass featuring TigerCool® technology reduces turf temperatures by 15 percent and up to 17 degrees.
